Description

The first Swedish Antarctic Expedition (1901-1903), led by Otto Nordenskjöld, sailed to Antarctica on the ship Antarctic captained by CA Larsen, and established a research station on Snow Hill Island. There six members overwintered and performed paleontological, meteorological, geomagnetic and geological studies, while the rest of the expedition set sail for South Orkney.

After the winter, on the way back to Snow Hill Island, the Antarctic got stuck in the ice and sank. At this point, the expedition members were divided into three groups. One of these overwintered an extra year on Snow Hill Island, whereas the other two groups were forced to build stone huts in order to overwinter at Hope Bay and Paulet Island. An Argentinean vessel, the Corbeta Uruguay, rescued the expedition in November 1903.

CHAQ 2020 is an Argentinean-Swedish project with fieldwork in the area around the Antarctic Peninsula aiming to investigate and document the historical remains of the first Swedish South Polar expedition under the leadership of Otto Nordenskjöld 1901-1903. The material was collected in January and February 2020.

This catalogue entry collects the photographic material, the panoramas, and the drone videos from Snow Hill Island.

The set consist of panoramas obtained from three scanning sessions with the Faro Focus m70 on January 12, 13 and 19, 2020 by Jonathan Westin. The original resolution of all but one is 20288 x

10144 pixels (one panorama has a resolution of 41434 x 20717 pixels). The outdoor panoramas were captured in early morning light on January 19 2020. Corresponding raw data point clouds in FLS-format for each of the scanning positions can be downloaded from the repository "CHAQ2020 - Snow Hill Island - Spatial data".
