Description

Data from forest plots surveyed in the Swedish National Forest Inventory. These data were used to investigate how different ecosystem services, and the number of services, change with stand age, in forest stands of different tree species compositions.

Additional information, to the dataset, is available in the article and in the supplementary information to the article, Micael Jonsson et al 2020 Environ. Res. Lett. 15 0940a8, <https://doi.org/10.1088/1748-9326/abaf1c>

For more information about method, data collection, data management, see Field instructions for the Swedish National Forest Inventory: <https://www.slu.se/en/Collaborative-Centres-and-Projects/the-swedish-national-forest-inventory/about-us/inventory-design/field-instructions/>
