Description

Region Skåne regularly carries out public health surveys to examine the health and living conditions of living and living conditions. Previous surveys have been carried out in 2008, 2004 and 2000.

In 2012, a sample was drawn from the population registry among persons aged 18-80 years and living in Region Scania. The sample was stratified after sex and geographic area. An additional sample was drawn from 17 different parts of Malmö, Helsingborg and Kristianstad. Two versions of the survey was sent out; one to younger (18-64 years) and one to older individuals (65-80 years). In total 28,029 persons answered the questionnaire, corresponding to 51,7 percent of the total sample (n= 54,250).

The survey included questions related to background, health, medicine, sleep and well-being, dental health, living habits, social relations, threats and violence, trust in social institutions, work, employment and economics, occupational health, homes, housing and housing, quality of life and healthcare.

In addition to data collected from surveys, registry data were used from Statistics Sweden.

Purpose:

The aim was to get a current picture of the health, living and environmental conditions among the inhabitants of Scania.
