Description

The survey "Health on equal terms?" is a national survey, conducted every year since 2004. The Public Health Agency is responsible for the survey and Statistics Sweden (SCB) is responsible for the distribution, collection and registration. During the data collection in 2014, the City of Gothenburg ordered an additional sample for Gothenburg.

The additional sample in 2014 included all individuals aged 16-84 years living in Gothenburg and consisted of 5,071 individuals. The total sample of Gothenburg, including the national sample, was 6,200 individuals. The questionnaire was answered by 2,698 individuals from Gothenburg, representing a response rate of 43,7 percent.

Including the national sample produced by Statistics Sweden (SCB), a total of 3,821 individuals participated from Västra Götaland County.

The questionnaire was printed in two versions. Addition to the national public health questionnaire, a similar questionnaire was conducted including the EQ-5D instrument (sent to the additional sample in Gothenburg). The questionnaires covered e.g. issues of health, lifestyle, economic conditions, work and employment, and security and social relations. In addition to data collected through the questionnaires, registry data were also included.

Purpose:

The aim of the national survey was to investigate the health in the population and to show changes in the population's health over time as a follow up of the national health politics. The aim of the additional sample in Gothenburg was to investigate the health in the population living in Gothenburg.

Data contains personal data

No

Unit of analysis

[Individual](#)

Population

All individuals aged 16-84 years and living in Gothenburg.

Time Method

[Longitudinal: Trend/Repeated cross-section](#)

Sampling procedure

[Probability: Stratified](#)

[Probability: Simple random](#)

För att kunna dra ett urval från populationen skapades en urvalsram som avgränsade, identifierade och möjliggjorde koppling till objekten i populationen. Urvalsramen i undersökningen skapades med hjälp av data från Registret över totalbefolkningen (RTB), version 2013-11-30. Antalet personer i urvalsramen var 426 254. Urvalsramen stratifierades på stadsdel. Totalt bildades 10 strata. En negativ samordning gjordes med det nationella urvalet. Det innebar att 1 129 personer i det nationella urvalet som tillhörde Göteborgs Stad inte kunde dras i tilläggsurvalet. Från urvalsramen drogs sedan ett slumpmässigt urval om 5 071 personer. Urvalsstorleken bestämdes av Göteborgs Stad. Mer information finns att läsa i Teknisk rapport.

Time period(s) investigated

2014-02-28 – 2014-05-06

Number of individuals/objects

2698
