Description

This exit poll survey was carried out in connection with the parliamentary election on September 15, 2002.

In VALU - Swedish exit poll surveys - voters leaving polling stations are asked by public service broadcaster Sveriges Television (SVT) to fill in a questionnaire and put it anonymously in a sealed box. After collecting and processing the responses, Sveriges Television is able to present an election forecast and an analysis of the reasons underlying the outcome of the election in it's Election Night broadcast. The surveys are referred to as VALU, an abbreviation for vallokalsundersökning, Swedish for exit poll survey. The first exit poll survey in Sweden was carried out at the parliamentary election in 1991. Since then similar studies have been carried out in connection with all Parliamentary elections, referendums and elections to the European Parliament.

Voters leaving the polling stations were asked to fill in a questionnaire including questions on: party voted for in the general and local elections; time for decision how to vote; preferred formation of the government after the election; party voted for in the general election 1998; opinion on the Swedish EU membership; vote intention in a referendum on Swedish EMU-membership; placement on a

political left-right scale; confidence in Swedish politicians; gender, age, occupational group, union membership and church attendance. The respondents also had to indicate how important a number of items were for the decision how to vote, as well as the importance of the party leader.

Purpose:

Provide analytical support for the election night broadcast on Swedish television during the election night, and for other post-election analysis.

Sampling procedure

[Mixed probability and non-probability](#)

In VALU a selection is made of a number of electoral districts and in this way their respective polling station. The number of electoral districts to be selected for VALU is allocated among the different regions according to the size of the electorate. Within each region, the electoral districts are then selected to be included in VALU. This selection is based on the size and geographical location of the electoral district.
