Description

The study's aim was to investigate oblong brooches of Vendel Period Scandinavia, i.e. Ørsnes types N & O and similar brooches, including transitional types surviving into the Early Viking Period. A database of 593 brooches from all of Scandinavia was studied and interpreted by typology, chronology, function, social significance, technological characteristics, production sites, interregional variation and ideological connotations. Unique brooches are described and discussed. Brooches from Uppåkra are also described and discussed, against the background of the new results. The study then puts forward two new seriation chronologies for Vendel Period female graves on Bornholm and in Sweden.

Purpose:

The aim of the study is to offer new perspectives on domed oblong brooches of Vendel period Scandinavia and transitional types which survived into the earliest Viking period. The new perspectives are based on a larger and more recent material base and a widened geographic scope, covering all of Scandinavia.

The dataset consists of a table with information on domed oblong brooches from Vendel period and early Viking period Scandinavia. The data includes inventory numbers, provenance, measurements, type and context. The data is downloadable in -xls and .csv format. The download package also contains the study article and a codebook.
