Description

The dataset contains the variables used in the study "Who is afraid of ticks and tick-borne diseases? Results from a cross-sectional survey in Scandinavia", by Slunge et al 2019. The questionnaire used in the data collection contains additional questions that are not included in this material. Data is available for download in SPSS and STATA format.

Data contains personal data

No

Language

[English](#)

Unit of analysis

[Individual](#)

Population

2668 respondents in Denmark, Norway and Sweden aged 18-99 years

Time Method

[Cross-section](#)

Sampling procedure

[Mixed probability and non-probability](#)

A representative sample in terms of age (18-29, 30-44, 45-59 and above 60), gender and region of residence was recruited via telephone registries in Denmark, Norway and Sweden. Respondents answered the web-based questionnaire online. See the article by Slunge et al for further information.

Time period(s) investigated

2016-10-01 - 2016-10-31

Variables

46

Number of individuals/objects

2668

Data format / data structure
